Dimitri de Jong

Full-stack developer

Almere, Netherlands · dimitriedj@gmail.com · rg-digital.dev · github.com/RazerGhost · LinkedIn

PROFILE

Full-stack developer with over three years of experience building and maintaining web applications, webshops and the systems behind them. I work from the interface down to the server, in PHP, TypeScript, Vue and Svelte, and I host and run my own applications in production. I build with AI tools every day and verify everything myself: small steps, a review of every change and thorough automated tests.

SKILLS

- **Frontend:** TypeScript, Vue 3, Nuxt, SvelteKit, HTML, CSS
- **Backend:** TypeScript (Hono), PHP, WordPress
- **Data:** PostgreSQL, MySQL/MariaDB, Redis, SQLite
- **Infrastructure:** Docker, Coolify, Traefik, Cloudflare, Hetzner, Linux
- **Workflow and tools:** Git, pnpm, Playwright, Claude Code

EXPERIENCE

Freelance full-stack developer – RG Digital May 2025 – present

- As a subcontractor for web agency Raion Design (May 2025 – Oct 2026), worked on a range of client projects, some under confidentiality. Among them, I maintained and extended the Lightspeed webshop (Twig theme) and PHP form server of a Dutch home-appliance retailer, including a fallback for when PHP fails.
- Built and maintained custom WordPress plugins in PHP and other features for client websites.
- Set up and run my own production infrastructure: Coolify on Hetzner, Docker, Traefik and Cloudflare.
- Built my own products; see Projects.

Freelance developer – Raion Design Feb 2025 – May 2025

Full-stack developer (part-time) – Raion Design Jul 2024 – Dec 2024

- Updated and fixed a client's Shopify store.
- Designed and built WordPress websites for the agency's clients.

Intern – Raion Design Aug 2023 – Jul 2024

- Built client websites from design to delivery, in WordPress with the Oxygen builder.
- Built proof-of-concept projects as part of my studies.

Stock clerk – GAMMA May 2022 – Oct 2022

- Restocked shelves and processed incoming deliveries.

PROJECTS

- **SHADE** (in development): a base for business applications that I design and build myself, to be released as open source. Each organisation runs its own instance and owns it outright. It covers accounts, permissions, admin, API, audit log and plugins; untrusted plugins run in a sandbox. Strict TypeScript (Hono, Nuxt), PostgreSQL and Valkey, with packages for Astro, Next, Nuxt and SvelteKit, and over 2,500 automated tests.
- **Haunt**: a desktop git client built with Tauri and Nuxt, with a Git view and a page for exploring a repository's code structure. github.com/rg-digital-dev/haunt

EDUCATION

Software Developer (MBO level 4, vocational) – ROC van Amsterdam Aug 2021 – Jun 2024
